

Benchmarking of Small Obstetric Units: Research into Training Accreditation, Staffing Models, Obstetric Recruitment Issues and Initiatives, and Doctor/Trainee Rotation

Produced by Keep The Horton General, June 2019

Keep The Horton General has collated data between March and June 2019 relating to the ways in which other small Consultant-Led Units nationally sustain their obstetric services. In 2016 Prof Stephen Kennedy said at the public consultation meeting in St Mary's Church, Banbury:

In 2012, the people who look after training made the decision that the Horton could no longer be a centre recognised for training, principally because of too few deliveries [taking place]. The training rules and regulations, which are applied throughout the country -not just in Banbury, but for every training centre across the country- decreed that if you were too small; if you had too few deliveries, then you could no longer be a training centre. It made sense...because to acquire sufficient skills and knowledge to be able to practise obstetrics safely it was decided that a hospital had to have at least 3500 births [per year].¹

Evidence KTHG has obtained invalidates this claim that the Horton had too few deliveries to be a safe obstetric unit with training accreditation, as numerous other hospitals are managing just that.

The IRP report of 2008, when maternity services in Banbury were last threatened, made several key recommendations. Point 5 in the report advocated greater clinical integration between the units:

The ORH must do more to develop clinically integrated practice across the Horton, John Radcliffe and Churchill sites as well as developing wider clinical networks with other hospitals, primary care and the independent sector.²

Rotation of consultants would avoid this "loss of skills" Prof. Kennedy referred to, and rotation of trainees would be of benefit to them as a less busy unit gives more time for discussion of cases with consultants.

The following paper analyses the raw data and statistics we have researched, for circulation in time for the June 2019 HHOSC meeting. This information has been formulated with the input of expert clinicians and considers some of the options for an obstetric service at the Horton which have either been omitted in the past or dismissed out of hand, and we believe, demonstrate a viable and sustainable future for an obstetric unit at the Horton.

What we did:

KTHG began by using the Office for National Statistics' most recently available Births by Communal Establishment spreadsheet (for 2015/16) to identify smaller Consultant Led Units (units which had fewer than 2500 deliveries). 29 open Consultant Led Units with between 1000 and 2500 births per year were contacted to ascertain basic data including:

- birth data from 2014-18
- whether the unit has obstetric training accreditation³
- the number of consultants employed at the unit
- permutation of staffing rotas
- whether hybrid rotas are in use⁴

³ RCOG Training for registrars/middles grades, not general training for Junior Doctors

⁴ In recent years, hybrid rotas have been developed where resident consultants cover some slots on a middle grade rota, with other slots covered by middle grade doctors with a non-resident consultant. They are often necessary to ensure there are enough staff with the necessary competencies on shifts. As a result, their use requires more consultant hours than traditional rotas. The RCOG concludes in its 2016 paper, *Obstetrics and Gynaecology Workforce*, that they are the only long-term sustainable staffing solution to middle-grade rota gaps.

27 units responded to this FOI request.

More recently, KTHG sent an FOI request to every Hospital Trust with CLU/s in England and Wales to ascertain:

- how many non-training middle grade doctors were employed at their CLUs
- whether they have any vacancies for non-training middle grades, registrars (middle grades in training), and consultants, and if so, how many for each
- whether they have experienced any difficulties in recruiting obstetricians and if so, at which level
- whether they utilise any recruitment initiatives beyond advertising to recruit to posts, and details of these
- whether they offer any incentives in order to attract/retain doctors
- whether any special recruitment initiatives or incentives used are successful

A small number of Trusts have more than one CLU under their jurisdiction. Where this was the case, we sent separate FOI requests to them to identify:

- the deanery they come under for RCOG training
- whether training accreditation was awarded at a Trust level, or to the specific sites
- whether consultants, registrars, non-training middle grades or trainees rotated between sites, and if so, whether this was for elective (clinic) work, or for acute or emergency work.

Comment on the Small CLUs

The 27 small units which responded to KTHG are distributed fairly evenly across the country. A map showing the geographical spread of the units is below:

Training Accreditation:

The paper explains “It is likely that the next decade will be a period of transition from a system where consultants are predominantly non-resident when on-call, to a system where the majority of consultants perform some ‘hands-on’ resident out-of-hours duties. Resident consultant working does not necessarily mean night shift working: evenings and/or weekend daytime working are alternative options that can be considered as part of a hybrid model, which also has the potential to improve out-of-hours training. Embracing resident consultant working will allow the profession to move forward in a positive and equitable way for all consultant staff and for the benefit of patients” Available online:

<https://www.rcog.org.uk/globalassets/documents/guidelines/working-party-reports/ogworkforce.pdf>

23 of the 27 small units responding confirmed that they have training accreditation. This equates to 85%. The mean annual birth rate for these hospitals was 1687 deliveries based on 2016 figures (the most recent ones where we had data for all the hospitals). This is virtually identical to the 2014-15 birth rate at the Horton General Hospital (1667), before the siphoning of more complex cases off to the John Radcliffe affected the birth rate in Banbury.

Fig. 2 The small units with training accreditation:

Hospital	2016 births	On CCG's List?
Furness General Hospital, Barrow in Furness	1067	No
Yeovil District Hospital	1471	No
North Devon District Hospital, Barnstaple	1530	No
Prince Charles Hospital, Merthyr Tydfil	1553	No
Scarborough Hospital	1558	No
Bassetlaw District General Hospital	1610	Yes
Epsom General Hospital	1679	Yes
Cumberland Infirmary, Carlisle	1702	No
County Hospital, Hereford	1718	No
Macclesfield District General Hospital	1743	Yes
Scunthorpe General Hospital	1832	Yes
Pilgrim Hospital (District Hospital), Boston	1874	No
Queen Elizabeth Hospital, Gateshead	1905	Yes
Dorset County Hospital, Dorchester	1908	Yes
Harrogate District Hospital	1928	Yes
Royal Lancaster Infirmary	1971	Yes
Princess of Wales Hospital, Bridgend	2031	No
Ysbyty Gwynedd	2060	No
Darlington Memorial Hospital	2099	Yes
James Pagett Hospital	2159	No
Hinchingbrooke Hospital	2230	Yes
Salisbury Hospital	2346	Yes
Worthing Hospital	2371	No

Case Study on a pair of small CLUs:

The CLUs belonging to Morecambe Bay NHS FT were very interesting for several reasons, though only Lancaster seems to have been investigated by the OCCG in its own research.

- Both Furness General Hospital and Lancaster Royal Infirmary have training accreditation, despite the annual birth rate being approximately 1100 and 1900 respectively.
- Both hospitals use Hybrid rotas, where consultants fill gaps in the middle-grade rotas, though due to 48 miles' distance between sites, no rotation of consultants or middle-grades takes place.
- Impressively, the Trust was highly commended by the RCOG in 2017 for professional development, and in 2018 for its standard of training. (These accolades would appear to refute entirely Stephen Kennedy's statement that hospitals with fewer than 3500 births don't provide enough experience for training doctors to acquire the skills they need.)
- The Trust comes under the North West Deanery, and training accreditation has been awarded to *the Trust itself* rather than being site-specific. This is significant because FGH is the smallest CLU with training accreditation we could find nationally, and its status would appear to be protected by this accreditation being trust-wide, where for instance, St Mary's Hospital in Newport, IOW, similarly experiencing around 1100 births per year does not have training accreditation.

It was clear from our dealings with the Morecambe Bay Trust that it is highly supportive of both its CLUs and the staff there, and extremely proud of its award-winning training standards. We feel that the OUHFT and OCCG could benefit greatly from their example. This is especially pertinent

given the reference to the potential use of hybrid rotas at the Horton in the minutes from the OCCG's board meeting of 10th August 2017:

The Lay Member Public and Patient Involvement believed that sufficient evidence around the workforce issues had not been presented and a hybrid rota should have been given more consideration. Clinical Lead for Obstetrics informed the Board that, having spoken to the Royal College, she was told that the hybrid rota was 'unaffordable in small units', such as the Horton.⁵

Clearly this is not borne out by hospitals such as Furness General Hospital.

Training Accreditation Status:

Six hospital Trusts from four different deaneries confirmed that their training accreditation had been awarded to the Trust as a whole, rather than to the specific units. Three are in the north of England, each with at least one small CLU. The other three belong to the same deanery; London and South East. This highlights 1) that there is not a consistent approach to the awarding of training accreditation nationwide, and 2) that it is an accepted practice of Postgraduate Deans elsewhere to award training accreditation Trust-wide (seemingly regardless of birth numbers of the small CLUs). This also means the way in which training accreditation is awarded directly impacts equality outcomes and patient choice. At the time of writing, Frimley Health Trust, the only other multi-CLU Trust in our Deanery, Thames Valley, has not yet responded on how its training accreditation is awarded. If it is Trust-wide, this would be an important precedent in making the case for OUHFT being treated similarly.

Trust	Hospital	Location	Deanery	2015 births
University Hospitals of Morecambe Bay NHS Foundation Trust	Furness General Hospital,	Barrow-in-Furness	North West	1069
University Hospitals of Morecambe Bay NHS Foundation Trust	Royal Lancaster Infirmary	Lancaster	North West	1979
County Durham & Darlington NHS Foundation Trust	University Hospital North Durham	Durham	North East	3088
County Durham & Darlington NHS Foundation Trust	Darlington Memorial Hospital	Darlington	North East	2214
Northern Lincolnshire and Goole NHS Foundation Trust	Scunthorpe General	Scunthorpe	Yorkshire & Humber	1869
Northern Lincolnshire and Goole NHS Foundation Trust	Princess of Wales Hospital, Grimsby	Grimsby	Yorkshire & Humber	2227
Lewisham and Greenwich NHS Trust	University Hospital	Lewisham	London and South East	3958
Lewisham and Greenwich NHS Trust	Queen Elizabeth Hospital	Woolwich	London and South East	4366
Epsom and St Helier University Hospitals NHS Trust	Epsom Hospital	Epsom	London and South East	1974
Epsom and St Helier University Hospitals NHS Trust	St Helier Hospital	Carshalton	London and South East	2962
King's College Hospital NHS FT	King's College Hospital	Denmark Hill	London and South East	4726
King's College Hospital NHS FT	Princess Royal University Hospital	Orpington	London and South East	4788

Fig. 3: the NHS Trusts to which Training Accreditation has been awarded at Trust Level

Use of Hybrid Rotas:

⁵ Minutes, Oxfordshire Clinical Commissioning Group Board Meeting: 10th August 2017, p.12 Available online: <https://www.oxfordshireccg.nhs.uk/documents/meetings/board/2017/08/2017-08-10-Oxfordshire-Clinical-Commissioning-Group-Minutes-FINAL.pdf>

OUHFT does not currently use hybrid rotas, however, 5 of the 26 small units from 4 separate Trusts which we contacted confirmed they use Hybrid rotas, shown overleaf. This equates to 19%.

The RCOG concludes in its 2016 guidance *Obstetrics and Gynaecology Workforce*, that Hybrid rotas (i.e. ones using resident consultants) are likely to be the only long-term solution to gaps in middle-grade staffing:

The issue of ensuring appropriate obstetrics and gynaecology medical staffing levels in most UK units is immediate. In most hospitals the solution is likely to include resident consultant working, with consultants and the middle grade junior doctors jointly staffing the slots on the out-of-hours rota, i.e. a hybrid rota... It is evident that resident consultants will be part of any sustainable solution to current workforce difficulties.⁶

Hospital	2016 births	Number of obs/gynae consultants currently employed (Mar 2019)	NHS Trust
Furness General Hospital, Barrow in Furness	1067	6 Obstetric/ Gynae Consultants	University Hospitals of Morecambe Bay NHS Foundation Trust
Royal Lancaster Infirmary	1971	11.46 Obstetric/Gynae Consultants	University Hospitals of Morecambe Bay NHS Foundation Trust
Scarborough Hospital	1558	7 Obstetric/Gynae Consultants + 1 P/T Gynae	York Teaching Hospital NHS Foundation Trust
Ysbyty Gwynedd	2060	12 Obstetric/Gynae consultants	Betsi Cadwaladr University Health Board
Salisbury Hospital	2346	10 Obstetric/Gynae Consultants	Salisbury NHS Foundation Trust

Fig. 4: the Small CLUs currently using Hybrid rotas

Given that, as KTHG understands, the catalyst for the withdrawal of training accreditation from the HGH in 2012 was the complaint from trainees that they were not getting sufficient out-of-hours supervision, it is worth bearing in mind that the RCOG-recommended implementation of Hybrid rotas would have a preventative effect on situations like this because of increased consultant presence:

For the majority of trainees, increased resident consultant presence provides a concomitant increase in the opportunities for training. Resident consultants should demonstrate equal commitment to training out-of-hours as within working hours. The time a trainee spends covering emergency duties in both obstetrics and gynaecology is more likely to be directly supervised by a consultant who is resident. For junior trainees, this is particularly valuable for clinical skills acquisition in the emergency setting, with better opportunities for workplace-based assessments, constructive feedback and delivery of the RCOG training curriculum. For senior trainees, it allows the more technically challenging clinical skills to be learnt in a safe environment. Appropriate consultant presence should maximise training opportunities and the skill of the trainer is to achieve the appropriate balance between direct and indirect supervision... Therefore, a hybrid rota should not necessarily be seen as a compromise, but may actually be a preferred solution to both workforce and training issues.⁷

The RCOG mentions in its 2016 paper an intention to collate examples of good practice which can be shared for the benefit of Trusts looking for information resources and support in this field.

Given that Hybrid rotas have been in existence since before the HGH was temporarily downgraded, the Trust ought to have explored seriously the option of employing resident consultants in Hybrid rotas as an alternative to downgrading the CLU, and KTHG believes that a thorough, independent exploration of this option ought to be requested by HHOSC.

⁶ *Obstetrics and Gynaecology Workforce*, RCOG, 2016. Available online: <https://www.rcog.org.uk/globalassets/documents/guidelines/working-party-reports/ogworkforce.pdf>

⁷ *Obstetrics and Gynaecology Workforce*, RCOG, 2016, p.18 Available online: <https://www.rcog.org.uk/globalassets/documents/guidelines/working-party-reports/ogworkforce.pdf>

Even with the requirement for greater consultant presence to compensate for middle-grade rota gaps, the research KTHG has done into how smaller units are staffed suggests that the information pack submitted to the options-scoring panel appears to overstate the workforce requirement for running a hybrid rota. For example, page 119 (Section 5 Paper 13) of the information pack contains the claims plus the statement that it is the model currently adopted by other small units in the UK. On the same page, the OUH claims that running 5 middle grades would require 11.4 consultants. A direct comparison can be made with the Hybrid rota at Scarborough (around 1500 births per year), which uses 5 ST3-5 (middle grades) and 1 ST2 (only Tier 1 not to work alone) and 7 obstetrics/gynae consultants plus 1 part-time gynae consultant. Salisbury Hospital is somewhat busier, averaging between 2200-2400 births per year, but also only has 10 consultants and 7 registrars contributing to their hybrid rota.

Another issue is that although the OUH rota gives ST3-5s it has claimed separately that only ST4 and above could work at the Horton. Yet each of the small units using Hybrid rotas have the more junior grades contributing to rotas.

Hospital	2016 births	Permutation of doctors used in 2018
Furness General Hospital, Barrow in Furness	1067	6 Consultants, 2 Higher, 2.3 Junior, 5 SAS grade. (WTE)
Royal Lancaster Infirmary	1971	11.7 consultants, 4.6 Higher, 7 Junior, 0 SAS grade. (WTE)
Scarborough Hospital	1558	7 consultants + 1 x P/T Gynae, 5 x ST 3-5s & 1 x ST1 all on run through training for obs and gynae, plus 2 staff grades.
Ysbyty Gwynedd	2060	Tier 3 Consultants: 1 in 7 weekdays 1 in 10 weekends, Middle grades and Tier 2 resident consultants: 1 in 9 days, Junior (tier 1): 1 in 8 days.
Ysbyty Glan Clwyd	1986	Tier 3 Consultants: 1 in 7 weekdays 1 in 10 weekends, Middle grades and Tier 2 resident consultants: 1 in 8 days, Junior (tier 1): 1 in 8 days.
Salisbury Hospital	2346	9/10 Consultants, 7 middle grades and 5 ST1/2s

Fig. 5: Hybrid rota permutations at small CLUs

The number of middle-grade doctors employed at the smaller units has also proved interesting, given that we were told to reopen the Horton, 9 WTE (whole time equivalent) non-training middle grades would be needed. For instance, Pilgrim Hospital in Boston, Lincolnshire (c.1900 births per year) employs 7 consultants and 8 middle grades. Worthing Hospital averages 2400 births per year but has 9 consultants, and 7 registrars, like Salisbury.

Rotation of Doctors within Multi-CLU Trusts

8 out of 11 Multi-CLU Hospital Trusts we were able to acquire data from confirmed that consultants rotate between sites. Interestingly, North Cumbria NHS Hospitals Trust said that 5 of their 10 consultants rotate between Whitehaven and Carlisle, despite the units being 35 miles apart. 6 of the 11 Trusts confirmed that registrars rotate between sites.

Staffing Problems and Use of Recruitment Programmes Beyond Advertising for Posts:

We asked the following, by FOI request, of the Trusts (Health Boards in Wales) to which the 157 obstetric units in England and the 12 obstetric units in Wales belong:

- how many non-training middle grade doctors were employed at their CLUs
- whether they have any vacancies for non-training middle grades, registrars (middle grades in training), and consultants, and if so, how many for each
- whether they have experienced any difficulties in recruiting obstetricians and if so, at which level
- whether they utilise any recruitment initiatives beyond advertising to recruit to posts, and details of these
- whether they offer any incentives in order to attract/retain doctors

- whether any special recruitment initiatives or incentives used are successful

Around 1/3 of Trusts which responded to our national FOI request confirmed that they had middle grade vacancies at the time of reply, which is in line with the RCOG's findings in their research for *Obstetrics and Gynaecology Workforce* from 2016. When asked if they had experienced difficulty recruiting obstetricians in recent years, 1/3 of the Trusts answered in the affirmative. Interestingly, though the majority were taking positive steps to counter this trend, a significant minority of Trusts didn't appear to have any additional measures in place beyond advertising, in terms of either targeted recruitment programmes or incentives, to remedy this situation. While there certainly are more vacancies than there are middle grade doctors in the UK to fill them, the varying efforts of different Trusts having trouble recruiting suggests that some are simply fatalistic and not sufficiently pro-active in their efforts. It seems old-fashioned and laissez-faire to be relying on adverts when so many hospitals are competing for a small pool of doctors.

The recruitment initiatives we learned about are described below.

RCOG's Medical Training Initiative Scheme

Around half of the Hospital Trusts responding to us said they had signed up to the RCOG's Medical Training Initiative (MTI) Overseas Doctors Scheme. The programme is open to doctors of the equivalent experience of ST2-4, and the RCOG summarises the scheme on its website as follows:

The MTI scheme allows International Medical Graduates (IMGs) to come to the UK for a maximum of two years to train within the NHS. IMGs benefit greatly from the knowledge, skills and techniques learned within the NHS and can use them to improve the level of patient care in their home country on their return. In addition, UK hospitals who provide a placement for IMGs benefit from increased workforce capacity and the skills and knowledge that IMGs can share with their UK colleagues.⁸

The hospitals using the MTI scheme typically recruited between one and three doctors in training this way, and all of them felt that its implementation has been successful. While the use of the MTI scheme is not a panacea for the nationwide staffing issues with middle-grades, as part of a holistic, proactive approach to sustaining the necessary clinical competencies alongside options such as Hybrid rotas, it could be useful.

Other Overseas Training Partnerships:

Leeds University Hospitals Trust explained that as well as being part of the RCOG's MTI scheme, they have a regular arrangement with the College of Physicians and Surgeons in Pakistan which provides two doctors in non-training middle grade posts.

Overseas Agency Recruitment

Several Trusts responding to our request explained that they had utilised agencies for overseas recruitment. Names of agencies were not typically given, though the company Remedium Ltd was mentioned in one response. All those who mentioned using agencies to fill vacancies claimed they had recruited successfully for these positions.

Incentives/Benefits Packages as a Means of Attracting Doctors

Four hospital Trusts told us they offered incentives or supplements for newly appointed obstetricians. Examples include:

- Relocation expenses paid
- Staff benefits e.g. salary sacrifice schemes available, home electronics, cycle to work scheme and lease cars
- £3,000 paid to middle grades on commencement of employment
- Discounted on-site nursery facility
- Free gym membership

⁸ <https://www.rcog.org.uk/en/careers-training/working-in-britain-for-non-uk-doctors/medical-training-initiative-mti-scheme/>

- Additional training opportunities

Conclusion:

From this research, which a small number of volunteers for KTHG have compiled in their spare time, it is evident that there are avenues for creating a sustainably resourced obstetric unit at the Horton, of which no exploration has been demonstrated (e.g. use of overseas recruitment programmes, the RCOG's MTI scheme), or which have been dismissed prematurely as being unviable without showing any evidence for this (e.g. Trust management claiming that there's no point using Hybrid rotas as they're too expensive, despite them being proven by the RCOG to be cheaper than alternatives such as using locums).

The IRP report in 2008 directed that, in the interests of patient safety, every possible effort to sustain a CLU at the Horton should be made. Individuals we have spoken to at other small obstetric units have spoken of the hard work which has gone into maintaining training accreditation and their pride at the success of this, for example at Morecambe Bay Hospital Trust. Our obstetrician contact at Pilgrim Hospital in Boston, Lincolnshire, commented that "the Trust and Consultant obstetricians have together worked very hard to maintain training accreditation here". Reflecting on this research, it strikes us that the the issues small CLUs face which threaten their sustainability needn't be insurmountable if there is the will and ingenuity to overcome them within Hospital Trusts.
