## Life expectancy at birth for females, wards significantly better and worse than Oxfordshire, 2015-19

There are clear inequalities in life expectancy across Oxfordshire, with people in the more deprived areas having significantly lower life expectancy compared with the less deprived. The gap in female life expectancy between the highest and lowest wards is 11.8 years.

A&E attendances aged under 5 years old, crude rate per 1,000 population, wards significantly better and worse than Oxfordshire, 2017/18 - 19/20

Although the rate in Oxfordshire is significantly lower than the national average, one ward, Brize Norton and Shilton, has a significantly higher rate than the national average. Eight of the 10 most deprived wards\* have a higher rate than the county average.
