

PLANNING & REGULATION COMMITTEE – 19 APRIL 2021

Policy Annex (Relevant Development Plan and other Policies)

Oxfordshire Minerals and Waste Core Strategy 2017 (OMWCS)

POLICY C1: SUSTAINABLE DEVELOPMENT

A positive approach will be taken to minerals and waste development in Oxfordshire, reflecting the presumption in favour of sustainable development contained in the National Planning Policy Framework and the aim to improve economic, social and environmental conditions of the area.

Planning applications that accord with the policies in this plan will be approved, unless material considerations indicate otherwise. Where there are no policies relevant to the application, or relevant plan policies are out of date, planning permission will be granted unless material considerations indicate otherwise, taking into account whether:

- any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits of the proposed development when assessed against the National Planning Policy Framework; or specific policies in the National Planning Policy Framework indicate that the development should be restricted.

POLICY C2: CLIMATE CHANGE

Proposals for minerals or waste development, including restoration proposals, should take account of climate change for the lifetime of the development from construction through operation and decommissioning. Applications for development should adopt a low carbon approach and measures should be considered to minimise greenhouse gas emissions and provide flexibility for future adaptation to the impacts of climate change.

POLICY C3: FLOODING

Minerals and waste development will, wherever possible, take place in areas with the lowest probability of flooding. Where development takes place in an area of identified flood risk this should only be where alternative locations in areas of lower flood risk have been explored and discounted (using the Sequential Test and Exceptions Test as necessary) and where a flood risk assessment is able to demonstrate that the risk of flooding is not increased from any source, including:

- an impediment to the flow of floodwater;
- the displacement of floodwater and increased risk of flooding elsewhere;
- a reduction in existing floodwater storage capacity;
- an adverse effect on the functioning of existing flood defence structures; and
- the discharge of water into a watercourse.

The opportunity should be taken to increase flood storage capacity in the flood plain where possible, particularly through the restoration of sand and gravel workings.

POLICY C4: WATER ENVIRONMENT

Proposals for minerals and waste development will need to demonstrate that there would be no unacceptable adverse impact on or risk to:

- The quantity or quality of surface or groundwater resources required for habitats, wildlife and human activities;
- The quantity or quality of water obtained through abstraction unless acceptable provision can be made;
- The flow of groundwater at or in the vicinity of the site; and
- Waterlogged archaeological remains.

Proposals for minerals and waste development should ensure that the River Thames and other watercourses and canals of significant landscape, nature conservation, or amenity value are adequately protected from unacceptable adverse impacts.

POLICY C5: LOCAL ENVIRONMENT, AMENITY AND ECONOMY

Proposals for minerals and waste development shall demonstrate that they will not have an unacceptable adverse impact on:

- the local environment;
- human health and safety;
- residential amenity and other sensitive receptors; and
- the local economy;
 - including from:
 - noise;
 - dust;
 - visual intrusion;
 - light pollution;
 - traffic;
 - air quality;
 - odour;
 - vermin;
 - birds;
 - litter;
 - mud on the road;
 - vibration;
 - surface or ground contamination;
 - tip and quarry-slope stability;
 - differential settlement of quarry backfill;
 - subsidence; and
 - the cumulative impact of development.

Where necessary, appropriate separation distances or buffer zones between minerals and waste developments and occupied residential property or other sensitive receptors and/or other mitigation measures will be required, as determined on a site-specific, case-by-case basis.

POLICY C7: BIODIVERSITY AND GEODIVERSITY

Minerals and waste development should conserve and, where possible, deliver a net gain in biodiversity.

The highest level of protection will be given to sites and species of international nature conservation importance (e.g. Special Areas of Conservation and European Protected Species) and development that would be likely to adversely affect them will not be permitted.

In all other cases, development that would result in significant harm will not be permitted unless the harm can be avoided, adequately mitigated or, as a last resort, compensated for to result in a net gain in biodiversity (or geodiversity). In addition:

- (i) Development that would be likely to have an adverse effect on a Site of Special Scientific Interest (either individually or in combination with other development) will not be permitted except where the benefits of the development at this site clearly outweigh both the impacts that it is likely to have on the Site of Special Scientific Interest and any broader impacts on the national network of Sites of Special Scientific Interest.
- (ii) Development that would result in the loss or deterioration of irreplaceable habitats, including ancient woodland and aged or veteran trees, will not be permitted except where the need for and benefits of the development in that location clearly outweigh the loss.
- (iii) Development shall ensure that no significant harm would be caused to:
 - Local Nature Reserves;
 - Local Wildlife Sites;
 - Local Geology Sites;
 - Sites of Local Importance for Nature Conservation;
 - Protected, priority or notable species and habitats,except where the need for and benefits of the development in that location clearly outweigh the harm.

All proposals for mineral working and landfill shall demonstrate how the development will make an appropriate contribution to the maintenance and enhancement of local habitats, biodiversity or geodiversity (including fossil remains and trace fossils), including contributing to the objectives of the Conservation Target Areas wherever possible. Satisfactory long-term management arrangements for restored sites shall be clearly set out and included in proposals. These should include a commitment to ecological monitoring and remediation (should habitat creation and/or mitigation prove unsuccessful).

POLICY C8: LANDSCAPE

Proposals for minerals and waste development shall demonstrate that they respect and where possible enhance local landscape character, and are informed by landscape character assessment. Proposals shall include adequate and appropriate

measures to mitigate adverse impacts on landscape, including careful siting, design and landscaping. Where significant adverse impacts cannot be avoided or adequately mitigated, compensatory environmental enhancements shall be made to offset the residual landscape and visual impacts.

Great weight will be given to conserving the landscape and scenic beauty of Areas of Outstanding Natural Beauty (AONB) and high priority will be given to the enhancement of their natural beauty. Proposals for minerals and waste development within an AONB or that would significantly affect an AONB shall demonstrate that they take this into account and that they have regard to the relevant AONB Management Plan. Major developments within AONBs will not be permitted except in exceptional circumstances and where it can be demonstrated they are in the public interest, in accordance with the 'major developments test' in the NPPF (paragraph 116). Development within AONBs shall normally only be small-scale, to meet local needs and should be sensitively located and designed.

POLICY C10: TRANSPORT

Minerals and waste development will be expected to make provision for safe and suitable access to the advisory lorry routes shown on the Oxfordshire Lorry Route Maps in ways that maintain and, if possible, lead to improvements in:

- the safety of all road users including pedestrians;
- the efficiency and quality of the road network; and
- residential and environmental amenity, including air quality.

Where development leads to a need for improvement to the transport network to achieve this, developers will be expected to provide such improvement or make an appropriate financial contribution.

Where practicable minerals and waste developments should be located, designed and operated to enable the transport of minerals and/or waste by rail, water, pipeline or conveyor.

Where minerals and/or waste will be transported by road:

- a)** mineral workings should as far as practicable be in locations that minimise the road distance to locations of demand for the mineral, using roads suitable for lorries, taking into account the distribution of potentially workable mineral resources; and
- b)** waste management and recycled aggregate facilities should as far as practicable be in locations that minimise the road distance from the main source(s) of waste, using roads suitable for lorries, taking into account that some facilities are not economic or practical below a certain size and may need to serve a wider than local area.

Proposals for minerals and waste development that would generate significant amounts of traffic will be expected to be supported by a transport assessment or transport statement, as appropriate, including mitigation measures where applicable.

POLICY M1: RECYCLED AND SECONDARY AGGREGATES

So far as is practicable, aggregate mineral supply to meet demand in Oxfordshire should be from recycled and secondary aggregate materials in preference to primary aggregates, in order to minimise the need to work primary aggregates.

The production and supply of recycled and secondary aggregate, including that which improves waste separation and the range or quality of end products, will be encouraged so as to enable the maximum delivery of recycled and secondary aggregate within Oxfordshire. Where practicable, the transport of recycled and secondary aggregate materials (both feedstock and processed materials) from locations remote from Oxfordshire should be by rail.

Provision will be made for facilities to enable the production and/or supply of a minimum of 0.926 million tonnes of recycled and secondary aggregates per annum.

Sites which are suitable for facilities for the production and/or supply of recycled and secondary aggregates at locations that are in accordance with policies W4 and W5 and other relevant policies of this Plan and of other development plans will be allocated in the Minerals and Waste Local Plan: Part 2 – Site Allocations Document. Permission will be granted for such facilities at these allocated sites provided that the requirements of policies C1 – C12 are met.

Permission will normally be granted for recycled and secondary aggregate facilities at other sites, including for temporary recycled aggregate facilities at aggregate quarries and landfill sites, that are located in accordance with policies W4 and W5 and that meet the requirements of policies C1 – C12, taking into account the benefits of providing additional recycled and secondary aggregate capacity and unless the adverse impacts of doing so significantly and demonstrably outweigh the benefits. Where permission is granted for such a facility at a time-limited mineral working or landfill site this will normally be subject to the same time limit as that applying to the host facility and the site shall be restored in accordance with the requirements of policy M10 for restoration of mineral workings at the end of its permitted period. Except where a new planning permission is granted for retention of the facility beyond its permitted end date, temporary facility sites shall be restored at the end of their permitted period.

Sites for the production and/or supply of recycled and secondary aggregate will be safeguarded under Policy M9 and/or W11 and safeguarded sites will be defined in the Site Allocations Document.

POLICY M6: AGGREGATE RAIL DEPOTS

Permission will be granted for new aggregate rail depots at locations with suitable access to an advisory lorry route shown on the Oxfordshire Lorry Route Maps (policy C10) and that meet the requirements of policies C1 – C12.

POLICY M9: SAFEGUARDING MINERAL INFRASTRUCTURE

Existing and permitted infrastructure that supports the supply of minerals in Oxfordshire is safeguarded against development that would unnecessarily prevent the operation of the infrastructure or would prejudice or jeopardise its continued use by creating incompatible land uses nearby.

Safeguarded sites include the following rail depot sites which are safeguarded for the importation of aggregate into Oxfordshire:

- Hennef Way, Banbury (existing facility);
- Kidlington (existing facility);
- Appleford Sidings, Sutton Courtenay (existing facility); and
- Shipton-on-Cherwell Quarry (permitted facility);

as shown on the Policies Map; and

- any other aggregate rail depot sites which are permitted, as identified in the Annual Monitoring Report.

Other safeguarded sites will be defined in the Minerals and Waste Local Plan: Part 2 – Site Allocations Document.

Proposals for development that would directly or indirectly prevent or prejudice the use of a site safeguarded for mineral infrastructure will not be permitted unless:

- the development is in accordance with a site allocation for development in an adopted local plan or neighbourhood plan; or
- it can be demonstrated that the infrastructure is no longer needed; or
- the capacity of the infrastructure can be appropriately and sustainably provided elsewhere.

POLICY W4: LOCATIONS FOR FACILITIES TO MANAGE THE PRINCIPAL WASTE STREAMS

Facilities (other than landfill) to manage the principal waste streams should be located as follows:

- a) Strategic waste management facilities should normally be located in or close to Banbury, Bicester, Oxford, Abingdon and Didcot, as indicated on the Waste Key Diagram. Locations further from these towns may be appropriate where there is access to the Oxfordshire lorry route network in accordance with Policy C10.
- b) Non-strategic waste management facilities should normally be located in or close to Banbury, Bicester, Oxford, Abingdon and Didcot, the other large towns (Witney and Wantage & Grove) and the small towns (Carterton, Chipping Norton, Faringdon, Henley-on-Thames, Thame and Wallingford), as indicated on the Waste Key Diagram. Locations further from these towns may be appropriate where there is access to the Oxfordshire lorry route network in accordance with Policy C10.
- c) Elsewhere in Oxfordshire, and particularly in more remote rural areas, facilities should only be small scale, in keeping with their surroundings.

The locations for strategic and/or non-strategic waste management facilities around Oxford, Abingdon, Didcot and Wantage and Grove exclude the Oxford Meadows, Cothill Fen, Little Wittenham and Hackpen Hill Special Areas of Conservation and a 200 metre dust impact buffer zone adjacent to these SACs.

As indicated on the Waste Key Diagram, strategic and non-strategic waste management facilities (that comprise major development) should not be located within Areas of Outstanding Natural Beauty except where it can be demonstrated that the 'major developments test' in the NPPF (paragraph 116), and as reflected in policy C8, is met.

POLICY W5: SITING OF WASTE MANAGEMENT FACILITIES

Priority will be given to siting waste management facilities on land that:

- is already in waste management or industrial use; or
- is previously developed, derelict or underused; or
- is at an active mineral working or landfill site; or
- involves existing agricultural buildings and their curtilages; or
- is at a waste water treatment works.

Waste management facilities may be sited on other land in greenfield locations where this can be shown to be the most suitable and sustainable option.

Cherwell Local Plan 1996 (CLP 1996) (saved policies)

POLICY C28: DESIGN CONSIDERATIONS

Control will be exercised over all new development, including conversions and extensions, to ensure that the standards of layout, design and external appearance, including the choice of external-finish materials, are sympathetic to the character of the urban or rural context of that development. In sensitive areas such as conservation areas, the area of outstanding natural beauty and areas of high landscape value, development will be required to be of a high standard and the use of traditional local building materials will normally be required.

POLICY TR10: HEAVY GOODS VEHICLES

Development that would generate frequent heavy goods vehicle movements through residential areas or on unsuitable urban or rural roads will not be permitted. The council will resist proposals for the establishment of heavy goods vehicle operating centres where they would create traffic problems or adversely affect the amenity of residential areas or villages.

Cherwell Local Plan 2011-2013 Part 1 (CLP)

POLICY PSD 1: PRESUMPTION IN FAVOUR OF SUSTAINABLE DEVELOPMENT

When considering development proposals the Council will take a proactive approach to reflect the presumption in favour of sustainable development contained in the National Planning Policy Framework. The Council will always work proactively with

applicants to jointly find solutions which mean that proposals can be approved wherever possible, and to secure development that improves the economic, social and environmental conditions in the area.

Planning applications that accord with the policies in this Local Plan (or other part of the statutory Development Plan) will be approved without delay unless material considerations indicate otherwise.

Where there are no policies relevant to the application or relevant policies are out of date at the time of making the decision then the Council will grant permission unless material considerations indicate otherwise – taking into account whether:

- any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole; or
- specific policies in the Framework indicate that development should be restricted.

POLICY ESD 1: MITIGATING AND ADAPTING TO CLIMATE CHANGE

Measures will be taken to mitigate the impact of development within the District on climate change. At a strategic level, this will include:

- Distributing growth to the most sustainable locations as defined in this Local Plan
- Delivering development that seeks to reduce the need to travel and which encourages sustainable travel options including walking, cycling and public transport to reduce dependence on private cars
- Designing developments to reduce carbon emissions and use resources more efficiently, including water (see Policy ESD 3 Sustainable Construction)
- Promoting the use of decentralized and renewable or low carbon energy where appropriate (see Policies ESD 4 Decentralised Energy Systems and ESD 5 Renewable Energy).

The incorporation of suitable adaptation measures in new development to ensure that development is more resilient to climate change impacts will include consideration of the following:

- Taking into account the known physical and environmental constraints when identifying locations for development
- Demonstration of design approaches that are resilient to climate change impacts including the use of passive solar design for heating and cooling
- Minimising the risk of flooding and making use of sustainable drainage methods, and
- Reducing the effects of development on the microclimate (through the provision of green infrastructure including open space and water, planting, and green roofs).

Adaptation through design approaches will be considered in more locally specific detail in the Sustainable Buildings in Cherwell Supplementary Planning Document (SPD).

POLICY ESD 6: SUSTAINABLE FLOOD RISK MANAGEMENT

The Council will manage and reduce flood risk in the District through using a sequential approach to development; locating vulnerable developments in areas at lower risk of flooding. Development proposals will be assessed according to the sequential approach and where necessary the exceptions test as set out in the NPPF and NPPG. Development will only be permitted in areas of flood risk when there are no reasonably available sites in areas of lower flood risk and the benefits of the development outweigh the risks from flooding.

In addition to safeguarding floodplains from development, opportunities will be sought to restore natural river flows and floodplains, increasing their amenity and biodiversity value. Buildings over or culverting of watercourses should be avoided and the removal of existing culverts will be encouraged.

Existing flood defences will be protected from damaging development and where development is considered appropriate in areas protected by such defences it must allow for the maintenance and management of the defences and be designed to be resilient to flooding.

Site specific flood risk assessments will be required to accompany development proposals in the following situations:

- All development proposals located in flood zones 2 or 3
- Development proposals of 1 hectare or more located in flood zone 1
- Development sites located in an area known to have experienced flooding problems
- Development sites located within 9m of any watercourses.

Flood risk assessments should assess all sources of flood risk and demonstrate that:

- There will be no increase in surface water discharge rates or volumes during storm events up to and including the 1 in 100 year storm event with an allowance for climate change (the design storm event)
- Developments will not flood from surface water up to and including the design storm event or any surface water flooding beyond the 1 in 30 year storm event, up to and including the design storm event will be safely contained on site.

Development should be safe and remain operational (where necessary) and proposals should demonstrate that surface water will be managed effectively on site and that the development will not increase flood risk elsewhere, including sewer flooding.

POLICY ESD7: SUSTAINABLE DRAINAGE SYSTEMS (SuDS)

All development will be required to use sustainable drainage systems (SuDS) for the management of surface water run-off.

Where site specific Flood Risk Assessments are required in association with development proposals, they should be used to determine how SuDS can be used on particular sites and to design appropriate systems.

In considering SuDS solutions, the need to protect ground water quality must be taken into account, especially where infiltration techniques are proposed. Where possible,, SuDS should seek to reduce flood risk, reduce pollution and provide landscape and wildlife benefits. SuDS will require the approval of Oxfordshire County Council as LLFA and SuDS Approval Body, and proposals must include an agreement on the future management, maintenance and replacement of the SuDS features.

POLICY ESD 8: WATER RESOURCES

The Council will seek to maintain water quality, ensure adequate water resources and promote sustainability in water use.

Water quality will be maintained and enhanced by avoiding adverse effects of development on the water environment. Development proposals which would adversely affect the water quality of surface or underground water bodies, including rivers, canals, lakes and reservoirs, as a result of directly attributable factors, will not be permitted.

Development will only be permitted where adequate water resources exist, or can be provided without detriment to existing uses. Where appropriate, phasing of development will be used to enable the relevant water infrastructure to be put in place in advance of development commencing.

POLICY ESD 10: PROTECTION AND ENHANCEMENT OF BIODIVERSITY AND THE NATURAL ENVIRONMENT

Protection and enhancement of biodiversity and the natural environment will be achieved by the following:

- In considering proposals for development, a net gain in biodiversity will be sought by protecting, managing, enhancing and extending existing resources, and by creating new resources
- The protection of trees will be encouraged, with an aim to increase the number of trees in the district
- The reuse of soils will be sought
- If significant harm resulting from a development cannot be avoided (though locating on an alternative site with less harmful impacts), adequately mitigated, or as a last resort, compensated for, then development will not be permitted
- Development which would result in damage to or loss of a site of international value will be subject to the Habitats Regulations Assessment process and will not be permitted unless it can be demonstrated that there will be no likely significant effects on the international site or that effects can be mitigated
- Development which would result in damage to or loss of a site of biodiversity or geological value of national importance will not be permitted unless the benefits of the development clearly outweigh the harm it would cause to the site and the

wider national network of SSSIs, and the loss can be mitigated to achieve a net gain in biodiversity/geodiversity

- Development which would result in damage to or loss of a site of biodiversity or geological value of regional or local importance including habitats of species of principal importance for biodiversity will not be permitted unless the benefits of the development clearly outweigh the harm it would cause to the site, and the loss can be mitigated to achieve a net gain in biodiversity/geodiversity
- Development proposals will be expected to incorporate features to encourage biodiversity, and retain and where possible enhance existing features of nature conservation value within the site. Existing ecological networks should be identified and maintained to avoid habitat fragmentation, and ecological corridors should form an essential component of green infrastructure provision in association with new development to ensure habitat connectivity
- Relevant habitat and species surveys and associated reports will be required to accompany planning applications which may affect a site, habitat or species of known or potential ecological value
- Air quality assessments will also be required for development proposals that would be likely to have a significantly adverse impact on biodiversity by generating an increase in air pollution
- Planning conditions/obligations will be used to secure net gains in biodiversity by helping to deliver Biodiversity Action Plan targets and/or meeting the aims of Conservation Target Areas. Developments for which these are the principal aims will be viewed favourably
- A monitoring and management plan will be required for biodiversity features on site to ensure their long term suitable management

POLICY ESD 11: CONSERVATION AREA TARGETS

Where development is proposed within or adjacent to a Conservation Area Target Area biodiversity surveys and a report will be required to identify constraints and opportunities for biodiversity enhancement. Development which would prevent the aims of a Conservation Target Area being achieved will not be permitted. Where there is potential for development, the design and layout of the development, planning conditions or obligations will be used to secure biodiversity enhancement to help achieve the aims of the Conservation Target Area.

POLICY ESD 13: LOCAL LANDSCAPE PROTECTION AND ENHANCEMENT

Opportunities will be sought to secure the enhancement of the character and appearance of the landscape, particularly in urban fringe locations, through the restoration, management or enhancement of existing landscapes, features or habitats and where appropriate the creation of new ones, including the planting of woodlands, trees and hedgerows.

Development will be expected to respect and enhance local landscape character, securing appropriate mitigation where damage to local landscape character cannot be avoided. Proposals will not be permitted if they would:

- Cause undue visual intrusion into the open countryside
- Cause undue harm to important natural landscape features and topography

- Be inconsistent with local character
- Impact on areas judged to have a high level of tranquillity
- Harm the setting of settlements, buildings, structures or other landmark features, or
- Harm the historic value of the landscape.

Development proposals should have regard to the information and advice contained in the Council's Countryside Design Summary Supplementary Planning Guidance, and the Oxfordshire Wildlife and Landscape Study (OWLS), and be accompanied by a landscape assessment where appropriate.

POLICY EDS 15: THE CHARACTER OF THE BUILT AND HISTORIC ENVIRONMENT

Successful design is founded upon an understanding and respect for an area's unique built, natural and cultural context. New development will be expected to complement and enhance the character of its context through sensitive siting, layout and high quality design. All new development will be required to meet high design standards. Where development is in the vicinity of any of the District's distinctive natural or historic assets, delivering high quality design that complements the asset will be essential.

New development proposals should:

- Be designed to deliver high quality safe, attractive, durable and healthy places to live and work in. Development of all scales should be designed to improve the quality and appearance of an area and the way it functions
- Deliver buildings, places and spaces that can adapt to changing social, technological, economic and environmental conditions
- Support the efficient use of land and infrastructure, though appropriate land mix and density/development intensity
- Contribute positively to an area's character and identity by creating or reinforcing local distinctiveness and respecting local topography and landscape features, including skylines, valley floors, significant trees, historic boundaries, landmarks, features or views, in particular within designated landscapes, within the Cherwell Valley and within conservation areas and their setting
- Conserve, sustain and enhance designated and non-designated 'heritage assets' (as defined in the NPPF) including buildings, features, archaeology, conservation areas and their settings, and ensure new development is sensitively sited and integrated in accordance with advice in the NPPF and NPPG. Proposals for development that affect non-designated heritage assets will be considered taking account of the scale of any harm or loss and the significance of the heritage asset as set out in the NPPF and NPPG. Regeneration proposals that make sensitive use of heritage assets, particularly where these bring redundant or under-used buildings or areas, especially any on English Heritage's At Risk Register, into appropriate use will be encouraged
- Include information on heritage assets sufficient to assess the potential impact of the proposal on their significance. Where archaeological potential is identified

this should include an appropriate desk based assessment and, where necessary, a field evaluation

- Respect the traditional patterns of routes, spaces, blocks, plots, enclosures and the form, scale and massing of buildings. Development should be designed to integrate with existing streets and public spaces, and buildings configured to create clearly defined active public frontages
- Reflect or, in a contemporary design response, re-interpret local distinctiveness, including elements of construction, elevational detailing, windows and doors, building and surfacing materials, mass, scale and colour palette
- Promote permeable, accessible and easily understandable places by creating spaces that connect with each other, are easy to move through and have recognisable landmark features.
- Demonstrate an holistic approach to the design of the public realm to create high quality and multi-functional streets and places that promotes pedestrian movement and integrates different modes of transport, parking and servicing. The principles set out in The Manual for Streets should be followed.
- Consider the amenity of both existing and future development, including matters of privacy, outlook, natural lighting, ventilation and indoor and outdoor space.
- Limit the impact of light pollution from artificial light on local amenity, intrinsically dark landscapes and nature conservation.
- Be compatible with up to date urban design principles, including Building for Life, and achieve Secured by Design accreditation.
- Consider sustainable design and layout at the masterplanning stage of design, where building orientation and the impact of micro climate can be considered within the layout.
- Incorporate energy efficient design and sustainable construction techniques, whilst ensuring that the aesthetic implications of green technology are appropriate to the context (also see Policies ESD1-5 on climate change and renewable energy).
- Integrate and enhance green infrastructure and incorporate biodiversity enhancement features where possible (see Policy ESD 10: Protection and Enhancement of Biodiversity and the Natural Environment and Policy ESD 17: Green Infrastructure). Well designed landscape schemes should be an integral part of development proposals to support improvements to biodiversity, the micro climate, and air pollution and provide attractive places that improve people's health and sense of vitality.
- Use locally sourced sustainable materials where possible.

The council will provide more detailed design and historic environment policies in the Local Plan Part 2.

The design of all new development will need to be informed by an analysis of the context, together with an explanation and justification of the principles that have informed the design rationale. This should be demonstrated in the Design & Access Statement that accompanies the planning application. The council expects all the issues within this policy to be positively addressed through the explanation and justification in the Design & Access Statement. Further guidance can be found on the Council's website.

The Council will require design to be addressed in the pre-application process on major developments and in connection with all heritage sites. For major sites/strategic sites and complex developments, Design Codes will need to be prepared in conjunction with the council and local stakeholders to ensure appropriate character and high quality design is delivered throughout. Design Codes will usually be prepared between outline and reserved matters stage to set out design principles for the development of the site. The level of prescription will vary according to the nature of the site.

POLICY ESD 16: THE OXFORD CANAL

We will protect and enhance the Oxford Canal corridor which passes south to north through the District as a green transport route, significant industrial heritage, tourism attraction and major leisure facility through the control of development. The length of the Oxford Canal through Cherwell District is a designated Conservation Area and proposals which would be detrimental to its character or appearance will not be permitted. The biodiversity value of the canal corridor will be protected.

We will support proposals to promote transport, recreation, leisure and tourism related uses of the Canal where appropriate, as well as supporting enhancement of the canal's active role in mixed use development in urban settings. We will ensure that the towpath alongside the canal becomes an accessible long distance trail for all users, particularly for walkers, cyclists and horse riders where appropriate.

Other than appropriately located small scale car parks and picnic facilities, new facilities for canal users should be located within or immediately adjacent to settlements. The Council encourages pre-application discussions to help identify significant issues associated with a site and to consider appropriate design solutions to these and we will seek to ensure that all new development meets the highest design standards.

POLICY SLE 4: IMPROVED TRANSPORT AND CONNECTIONS

The Council will support the implementation of the proposals in the Movement Strategies and the Local Transport Plan to deliver key connections, to support modal shift and to support more sustainable locations for employment and housing growth.

We will support key transport proposals including:

- Transport Improvements at Banbury, Bicester and the Former RAF Upper Heyford in accordance with the County Council's Local Transport Plan and Movement Strategies
- Projects associated with East-West rail including new stations at Bicester Town and Water Eaton
- Rail freight associated development at Graven Hill, Bicester
- Improvements to M40 junctions

Consultation on options for new link and relief roads at Bicester and Banbury will be undertaken through the Local Transport Plan (LTP) review process. Routes

identified following strategic options appraisal work for LTP4 will be confirmed by the County Council and will be incorporated in Local Plan Part 2.

New development in the District will be required to provide financial and/or in-kind contributions to mitigate the transport impacts of development.

All development where reasonable to do so, should facilitate the use of sustainable modes of transport to make the fullest possible use of public transport, walking and cycling. Encouragement will be given to solutions which support reductions in greenhouse gas emissions and reduce congestion. Development which is not suitable for the roads that serve the development and which have a severe traffic impact will not be supported.

POLICY SLE 5: HIGH SPEED RAIL 2

The design and construction of the High Speed 2 Rail Link must minimise adverse impacts on the environment, the local economy and local communities and maximise any benefits that arise from the proposal.

The implementation of HS2 will also be expected to:

- Deliver high quality design to protect communities and the environment from noise and visual intrusion
- Manage the construction to minimise the impact on communities and the environment
- Adopt sustainable procurement and construction methods
- Minimise adverse social and economic impacts, by maintaining accessibility and avoiding the severance of communities and agricultural holdings
- Ensure that community and other benefits are fully realised.

HS2 is a national infrastructure project. The line of the railway and associated works will be established and authorised by the way of primary legislation, requiring a Hybrid Bill to be introduced to Parliament which, if passed, will become an Act of Parliament. Cherwell District Council will work with High Speed 2 Ltd, with the aim of influencing the design and construction of the route through Oxfordshire.

Recognising that the decision to authorise the railway and associated works will sit with Parliament, the Council's involvement will be focussed on seeking the best outcome for the environment, local communities and businesses affected by the proposed railway scheme.

The Council will work with HS2 Ltd to:

- Develop a route-wide planning regime to be included within the Hybrid Bill, which supports the Council's aspirations for a well design, sustainably constructed railway
- Support work necessary to ensure a robust Environmental Impact Assessment is carried out to determine significant environmental effects o the railway in Cherwell District
- Support the development and implementation of a Code of Construction Practice to address the construction impacts of the scheme

- Achieve its sustainability objectives.

South Oxfordshire Local Plan (SOLP) 2035

POLICY DES6: RESIDENTIAL AMENITY

1. Development proposals should demonstrate that they will not result in significant adverse impacts on the amenity of neighbouring uses, when considering both individual and cumulative impacts, in relation to the following factors:
 - i) loss of privacy, daylight or sunlight;
 - ii) dominance or visual intrusion;
 - iii) noise or vibration;
 - iv) smell, dust, heat, odour, gases or other emissions;
 - v) pollution, contamination or the use of/or storage of hazardous substances;
and
 - vi) external lighting.

POLICY ENV1: LANDSCAPE AND COUNTRYSIDE

1. The highest level of protection will be given to the landscape and scenic beauty of the Chilterns and North Wessex Downs Areas of Outstanding Natural Beauty (AONBs):
 - Development in an AONB or affecting the setting of an AONB will only be permitted where it conserves, and where possible, enhances the character and natural beauty of the AONB;
 - Development in an AONB will only be permitted where it is appropriate to the economic and environmental wellbeing of the area or promotes understanding or enjoyment of the AONB;
 - Major development in an AONB will only be permitted in exceptional circumstances and where it can be demonstrated to be in the public interest;
and
 - Development proposals that could affect the special qualities of an AONB (including the setting of an AONB) either individually or in combination with other developments, should be accompanied by a proportionate Landscape and Visual Impact Assessment.
2. South Oxfordshire's landscape, countryside and rural areas will be protected against harmful development. Development will only be permitted where it protects and, where possible enhances, features that contribute to the nature and quality of South Oxfordshire's landscapes, in particular:
 - i) trees (including individual trees, groups of trees and woodlands), hedgerows and field boundaries;
 - ii) irreplaceable habitats such as ancient woodland and aged or veteran trees found outside ancient woodland;
 - iii) the landscapes, waterscapes, cultural heritage and user enjoyment of the River Thames, its tributaries and flood plains;
 - iv) other watercourse and water bodies;

- v) the landscape and setting of settlements or the special character and landscape setting of Oxford;
 - vi) topographical features;
 - vii) areas or features of cultural and historic value;
 - viii) important views and visually sensitive skylines; and
 - ix) aesthetic and perceptual features such as tranquillity, wildness, intactness, rarity and enclosure.
3. Development which supports economic growth in rural areas will be supported provided it conserves and enhances the landscape, countryside and rural areas.
 4. The Council will seek the retention of important hedgerows. Where retention is not possible and a proposal seeks the removal of a hedgerow, the Council will require compensatory planting with a mixture of native hedgerow species.

POLICY ENV12: POLLUTION

1. Development proposals should be located in sustainable locations and should be designed to ensure that they will not result in significant adverse impacts on human health, the natural environment and/or the amenity of neighbouring uses.
2. The individual and cumulative impacts of development on human health, the natural environment and/or local amenity will be considered when assessing development proposals.
3. The consideration of the merits of development proposals will be balanced against the adverse impact on human health, the natural environment and/or local amenity, including the following factors:
 - noise or vibration;
 - smell, dust, odour, artificial light, gases and other emissions;
 - air pollution, contamination of the site or its surroundings and hazardous substances nearby;
 - land instability; and
 - any other relevant types of pollution.

POLICY TRANS5: CONSIDERATION OF DEVELOPMENT PROPOSALS

1. Proposals for all types of development will, where appropriate:
 - i) provide for a safe and convenient access for all users to the highway network;
 - ii) provide safe and convenient routes for cyclists and pedestrians, both within the development, and including links to rights of way and other off-site walking and cycling routes where relevant;
 - iii) provide for covered secure and safe cycle parking, complemented by other facilities to support cycling where relevant;
 - iv) be designed to facilitate access to high quality public transport routes, including safe walking routes to nearby bus stops or new bus stops;
 - v) provide for appropriate public transport infrastructure;

- vi) be served by an adequate road network which can accommodate traffic without creating traffic hazards or damage to the environment;
- vii) where new roads, pedestrian routes, cycleways and street lighting are to be constructed as part of the development, they should be constructed to adoptable standards and be completed as soon as they are required to serve the development;
- viii) make adequate provision for those whose mobility is impaired;
- ix) be designed to enable charging of plug-in and other low emission vehicles in safe, accessible and convenient locations;
- x) provide for loading, unloading, circulation and turning space;
- xi) be designed to enable the servicing of properties by refuse collection vehicles;
- xii) provide for parking for disable people;
- xiii) provide for the parking of vehicles in accordance with Oxfordshire County Council parking standards, unless specific evidence is provided to justify otherwise; and
- xiv) provide facilities to support the take up of electric and/or low emission vehicles.

Cholsey Neighbourhood Plan

POLICY CNP T2: TRANSPORT AND AONB

Proposals which improve public transport facilities, increase disabled provision and secure off-road car and cycle parking provision for rail users at Cholsey Station will be supported and encouraged. Where appropriate proposals should be designed to minimise their impact on the AONB.
